

RegisterBlast Accessibility Conformance Report

International Edition

(Based on VPAT® Version 2.5Rev)

Name of Product/Version: RegisterBlast Resource Portal

Report Date: July 29, 2026

Product Description: The RegisterBlast Resource Portal is the staff-facing web application used by service providers to manage their availability, appointments, and queues, and to check in and serve registrants.

Contact Information: support@registerblast.com

Notes: This document covers the RegisterBlast resource portal pages. This voluntary report supersedes all previous reports dated before the report date above. The product relies on some third-party libraries (for example, JavaScript libraries) which are not developed directly by the company. In these circumstances, these products have been evaluated to ensure that any defects have no negative impact on accessibility. WCAG 2.2 Level A and AA criteria are assessed in this report for the first time. Level AAA criteria are provided for information only; no Level AAA conformance is claimed.

Evaluation Methods Used: Manual code review, manual keyboard and screen reader testing, and accessibility evaluation tools (for example WAVE Evaluation Tool, Siteimprove Accessibility Checker, Webhint, and BrowserStack Accessibility Toolkit). Screen reader testing used NVDA and VoiceOver, with periodic testing in additional screen readers. Testing was performed internally in July 2026 by testers familiar with both accessibility requirements and the product's common workflows, and included manual verification at 200% zoom, at a 320 CSS pixel viewport width, with increased text spacing, and in both display orientations.

Standard HTML controls are used where possible, and WAI-ARIA is used to expose names, roles, states, and values for custom components such as dialogs, popovers, color pickers, and data grids. Grid paging controls, including the page number field and the rows-per-page selector, carry text names. One known exception: in data grids, the controls for moving and removing a column are hidden from assistive technology because the same actions are available in a fully labeled "Choose Columns" dialog.

2.5.7 Dragging Movements (Level AA 2.2 only) EN 301 549 Criteria – Does not apply Revised Section 508 – Does not apply	Supports	All functionality that can be performed by dragging can also be performed without dragging. Lists that can be reordered by dragging provide keyboard operation and named "Move up" and "Move down" buttons on each item, which are revealed when they receive focus so they are available to screen reader users regardless of reading mode. Where items can be dragged to another day on a calendar, a date field on the item's edit form performs the same move.

Two exceptions rely on provisions of the criterion rather than on size: the controls for moving a data grid column are small, and an equivalent, larger control for the same action is available in the "Choose Columns" dialog; and the contextual help indicator beside a field label is sized by the surrounding label text, which the criterion excepts for targets positioned within a line of text.
